

FORMULARY MANAGEMENT

Offering Cost-Effective Solutions for Your Facility

Diamond utilizes formulary management to help keep your facility's costs reduced. We work in cooperation with your medical staff to develop drug formularies and make cost-effective recommendations.

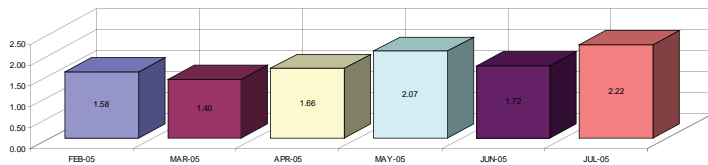

Due to our large volume and buying power, we are able to offer you the most competitive pricing on prescriptions and medical supplies. Another of our cost-saving advantages is that we will provide your facility with credit on full or partial cards of blister packaged medication. However, our main means of cost reduction is our formulary management program.

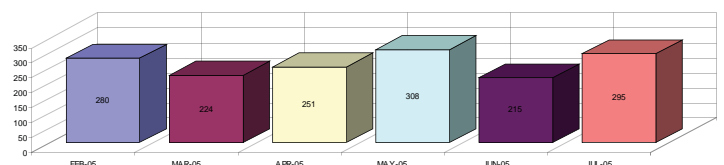

Working with your medical staff, we will develop a comprehensive, cost-effective drug formulary. We are also proactive in enforcing the formulary, offering cost saving recommendations, and alerting your staff daily of any non-formulary medications ordered without approval.

In addition, we will provide your facility with monthly formulary management reports. These reports are extensive, and are customized to meet your facility's needs. Our formulary management reports break medication expenditures into specific medication classes, non-formulary vs. formulary, and multiple other formats. We will also compare month to month expenditures to assist your facility in monitoring medication usage.
